Preface to the Second Edition	V
Acknowledgments	VII
The Authors	IX
Abbreviations and Important Terms	XIII
1 Introduction	1
<i>Felipe Wolff-Fabris and Hauke Lengsfeld</i>	
1.1 Materials	1
1.2 Continuous Fiber Reinforced Plastics	4
1.2.1 Property Profile	4
1.2.2 Manufacturing	6
1.2.3 Applications	9
1.3 References	10
2 Prepregs and Their Precursors	11
<i>Felipe Wolff-Fabris, Hauke Lengsfeld, and Johannes Krämer</i>	
2.1 Structure and Preparation	13
2.2 Matrix Systems	16
2.3 Fibers and Textiles	20
2.4 Prepreg Systems	23
2.4.1 Thermoset Prepregs	23
2.4.2 Thermoplastic Prepregs	26
2.5 References	30
2.6 Additional Information	30

3	Prepreg Technology	31
	<i>Hauke Lengsfeld and Mike Turner</i>	
3.1	Historical Background	31
3.2	Introduction: Manufacturing Methods	33
3.2.1	Design of a Prepreg Production Line	35
3.2.2	Thermoset Prepreg Manufacturing Methods	36
3.2.2.1	Hot Melt Processes	36
3.2.2.2	Solvent Coating/Solvent Dip Method for Thermoset Prepregs	41
3.2.3	Thermoplastic Prepreg Manufacturing Methods	43
3.2.3.1	Powder Coating Process	43
3.2.3.2	Extrusion Process	46
3.2.3.3	Solvent Coating/Solvent Dip Method for Thermoplastic Prepregs	47
3.2.4	Prepreg Variations	48
3.2.4.1	Slit Tape	48
3.2.4.2	Towpregs	49
3.2.5	Effect of Manufacturing Parameters	50
3.2.5.1	Matrix Content	50
3.2.5.2	Level of Impregnation	51
3.2.5.3	Tack (Tackiness)	53
3.3	References	55
4	Prepregs: Processing Technology	57
	<i>Hauke Lengsfeld, Javier Lacalle, and Thomas Neumeyer</i>	
4.1	Introduction	57
4.2	Cutting of Thermoset Prepregs	60
4.2.1	Manual Cutting	60
4.2.2	Automated Cutting	61
4.3	Hand Lay-up of Thermoset Prepregs	65
4.4	Automated Lay-up Technologies: Automated Tape Laying (ATL) and Automated Fiber Placement (AFP)	67
4.4.1	Introduction	67
4.4.1.1	Goal of Automated Lay-up Processes	71
4.4.1.2	Principle Process Steps of Automated Lay-up Technologies	72
4.4.1.3	Prepregs for Automated Lay-up Processes	76
4.4.1.4	Machine Architecture	81
4.4.2	Automatic Tape Laying (ATL)	86
4.4.2.1	Introduction	86

4.4.2.2	Thermoset Prepreg Materials for ATL	88
4.4.2.3	General Principle of ATL Processes	90
4.4.2.4	ATL Technology and Major Subsystems	92
4.4.2.5	Selection of Machine Configuration for ATL Processes	95
4.4.3	Automatic Fiber Placement (AFP)	101
4.4.3.1	Introduction	101
4.4.3.2	Prepreg Materials for AFP	102
4.4.3.3	General Principle of AFP Processes	104
4.4.3.4	AFP Technology and Configuration	107
4.4.3.5	Criteria to Select an AFP Configuration	117
4.4.4	Productivity and Cost Effectiveness of Lay-up Processes	119
4.4.4.1	Lay-up and Floor-to-Floor Productivity	119
4.4.4.2	Characterization of the Machine Performance	121
4.4.4.3	Cost Effectiveness of Automated Lay-up Processes	124
4.4.5	Production of Molded Parts on the Basis of Thermoplastic UD-Tapes	125
4.4.5.1	2D Lay-ups Based on UD Tapes as Semi-Finished Products	125
4.4.5.2	Process Technologies for the Production of Lay-ups Based on UD Tapes	128
4.5	Pultrusion	133
4.6	Hot Drape Forming	137
4.7	Same-Qualified-Resin-Transfer-Molding Processes (SQRTM)	144
4.8	References	146
4.9	Additional Information	147
5	Curing and Consolidation Technologies	149
	<i>Felipe Wolff-Fabris, Hauke Lengsfeld, and Thomas Neumeyer</i>	
5.1	Fundamentals of the Curing Cycle	149
5.2	Autoclave Processing	153
5.3	Oven Curing	157
5.4	Quickstep™ Technology	157
5.5	Press Molding/Forming Processes	159
5.5.1	Press Molding Processes for the Production of Thermoset Components	159
5.5.2	Press Molding Processes for the Production of Thermoplastic Components	160
5.5.2.1	Pre-Consolidation Processes	162

5.5.2.2	Thermoforming of Consolidated Tape Layers	163
5.5.2.3	Profile Production from Thermoplastic UD Tapes . .	166
5.6	Induction Processes	168
5.7	Microwave Curing	169
5.8	Electron Beam Curing	171
5.9	References	175
6	Tooling Technology	177
	<i>Hauke Lengsfeld and Hilmar Apmann</i>	
6.1	Requirements	178
6.2	Tooling Materials	181
6.2.1	Metals	181
6.2.2	Fiber Composite Materials GFRP/CFRP	184
6.2.3	Other Materials	188
6.3	Manufacture of Tools	190
6.3.1	Direct Manufacturing of Forming Tools	190
6.3.2	Indirect Manufacturing of Forming Tools	192
6.4	Tooling Concepts and Examples	194
6.4.1	Hot Forming Tools	195
6.4.2	Curing Molds	196
6.4.2.1	Open Mold Curing Tools	201
6.4.2.2	Closed Mold Curing Tools	201
6.4.3	Release Agents and Cleaning	202
6.5	Additional Information	202
7	Testing of Prepregs	203
	<i>Johannes Krämer and Hauke Lengsfeld</i>	
7.1	Characterization of the Unprocessed Prepreg	204
7.1.1	Prepreg Areal Weight, Resin Content, and Fiber Areal Weight	204
7.1.2	Resin Flow	204
7.1.3	Tack	206
7.1.4	Drapability	207
7.1.5	Volatiles	207
7.1.6	Viscosity	208
7.1.7	Water Pickup Test (WPU Test)	210
7.1.8	Microscopy Cut Edge Test	211
7.1.9	Tensile Test on Thermoplastic UD Tapes (Single-Ply Test)	212
7.2	Characterization of the Cured/Processed Prepreg	212
7.2.1	Fiber Volume Content	212

7.2.2	Determination of Glass Transition Temperature	214
7.2.3	Cured Ply Thickness (CPT)	215
7.3	References	216
8	Design and Production	217
	<i>Hauke Lengsfeld</i>	
8.1	Design Concepts	217
8.1.1	Positive/Negative Design	217
8.1.2	Integral/Differential Design	219
8.1.3	Open Mold Concepts	222
8.2	Determining Factors and Interactions	227
8.2.1	Determining Factors during Component Manufacturing	227
8.2.2	Interrelations during Component Manufacturing	229
8.3	References	238
9	Conclusion	239
	Index	241
